More than 2 billion gallons of water circulate every day beneath New York City.

COSMO is a movable artifact, made out of customized irrigation components, to make visible and enjoyable the so-far hidden urbanism of pipes we live by.

An assemblage of ecosystems, based on advanced environmental design, engineered to filter and purify 3,000 gallons of water, eliminating suspended particles and nitrates, balancing the pH, and increasing the level of dissolved oxygen.

The United Nations estimates that by 2025 two-thirds of the global population will live in countries that lack sufficient water.

COSMO is designed as both an offline and an online prototype. Its purpose is to trigger awareness, to be easily reproduced all around the world, giving people access to drinking water, and to a dialogue about it.
