For the garden festival Genève: Villes et Champs, The Cloud Collective was selected to execute one of the 13 gardens for the summer of 2014. The festival focuses on the co-habitation of the urban and the natural within the context of the urban expansion of Geneva. The site of this installation, a viaduct over a small highway, is particularly violent and quite out-of-tune with the idea of the garden as a peaceful natural haven. Instead, the project focusses on the character of the site and tries to prove that even these locations of highways and car dealers – despite their anonymous and generic character – can play an important role in the production of food and biomass.

A closed system of transparent tubes, clinging onto the viaduct is used for the production of algae,

which grow exclusively on sunlight and CO₂, both abundantly present on the site. These algae can be used to filter air, as combustible biomass or even as raw material for different cosmetic and alimentary products. A steel structure, supporting all the secondary equipment such as pumps, filters and solar panels, functions as a marker for the quickly passing traffic and provides explanations on a more detailed level for pedestrians and cyclists.
