As the corona pandemic spread around the world, our homes became critical for safeguarding our health.

But what very quickly became apparent was that many people, particularly in cities, did not live in suitable environments to cope with this new-found reality.

As we look towards the future of housing in light of corona, what do our homes need to best provide for our health and wellbeing? And how can we rapidly increase the amount of quality, affordable housing at a cost that is economically feasible for cities?
