Las Americas Housing: Catalyst for Urban Regeneration
<https://urbannext.net/las-americas-housing/>

Las Americas is a prototype for the development of vertical dwellings in the city of Leon, Mexico. The housing project aims to offset the city's unchecked sprawl, serving as a catalyst for urban regeneration and improved quality of life in low-income communities.

Traditional notions of homeownership currently lock developments into becoming acres of identical free-standing homes in remote areas far from the economic center. An extensive expansion of municipal utilities and expensive transportation programs have led to a decline in the region's economy and a loss of critical density within Leon.

Las Americas Housing: Catalyst for Urban Regeneration

<https://urbannext.net/las-americas-housing/>

We worked with Imuvi Development and the City of Leon to rethink housing models in the city and develop a structure that would be both cost-effective and encourage tenants to value vertical dwellings just as much as their freestanding single-family counterparts.

Resonant of the traditional home's sense of privacy, no two units face one another. Units are arranged in a single-loaded corridor to face the courtyard and provide views out to the neighborhood, promoting the sense of private homeownership.
