Designed for Pocket Living, Mapleton Crescent SW18 has a variety of well-used internal lounges and roof gardens for residents. Two thirds of the 89 high-quality homes are dual-aspect and 53 homes (60 %) are for local Londoners. Above the entrance, residents lounge, cycles and ancillary spaces on the first 3 floors, a concrete platform was created. The tower's triangular core took six weeks to cast in concrete and 243 off-site volumetric steel modules, which incorporate both the apartment and common corridor, were craned in at a rate of one floor per day.

The 450sqm small triangular site is heavily constrained by a culvert, adjacent electricity substation and river wall, making storage for building materials and vehicle movements difficult during construction. Volumetric construction cut site waste, reduced construction time and was much cheaper than traditional construction.

ISSN : 2575-5374

The approach taken by Pocket Living and Metropolitan Workshop at Mapleton Crescent SW18 could unlock constrained sites across London and could be the beginning of a modular build revolution as an answer to the housing crisis, demonstrating originality and innovation.
