Mare a Mare Footbridges: Transparent Structure

<https://urbannext.net/mare-a-mare-footbridges-transparent-structure/>

The project consists of building six footbridges across the scrub, the streams and the rivers. On the scale of the large landscape, the installation of a light, transparent structure aims to disappear in the sandstone of these wild and little frequented natural spaces.

Indeed, they are visible to the visitors in their entirety only within a radius of less than 30 meters. To respond to the landscape, the project is made in the finest possible corten steel structure (rust tint) to make the structure non-existent in a near and far landscape and to confuse the footbridges with the vegetation.
