The international competition proposes the transformation of the city's port area into an artistic hub. The site is overlooked by an old grain silo dating from 1935, one of the first in the country to be constructed with cylindrical cells made of reinforced concrete. The building is a modernist icon, praised by giants of architecture such as Walter Gropius or Le Corbusier, and will be incorporated into the new museum complex. The new facility is located next to the multi-award-winning Kilden auditorium and theatre, a project carried out by the young Finnish architecture firm ALA Architects, winner of the design competition for the new Helsinki Central Library.

The proposal by MX_SI and Mestres Wåge achieves integration with the surroundings by emphasising the existing buildings, using the expressiveness of the silo as a container for one of the key pieces in the proposal: the Kunstsilo museum. In addition to the new museum and a performing arts school, the project site also includes a hotel and a building that serves as an incubator for artistic startups. The different volumes are placed and dimensioned in such a way as to create a diverse

The old silo building, the warehouse next to the sea, and a new annex on the eastern side will house what is set to become one of the leading contemporary art museums in the Nordic countries. The planning strategy involves the creation of a large ground floor hall with four different heights, around which the entire project is arranged. The hall will be overlooked by the 20-metre-tall silos with their

Meanwhile, for the performing arts school three adjacent but offset volumes have been designed, creating a variety of spaces (both inside and outside). The entrance, from the silo square, has been designed as a great outdoor hall with semi-sheltered spaces. The central square of the project is complemented by the hotel, which consists of four volumes of between four and seven floors, and the startup incubator building, with seven floors.
