Hybrid infrastructure. Sport and cultural platforms.

This Project takes part on a series of interventions on urban reengineering, focalized into consolidate a network of cultural, sport and assistance spaces as new urban models of collective nature for the popular areas of Caracas. The Project establishes a hybrid alternative to public management, based on microsurgery operations upon the territorial mesh; through active and collective protocols for the physical and organizational rehabilitation of self-constructed and organic growth areas of the city.

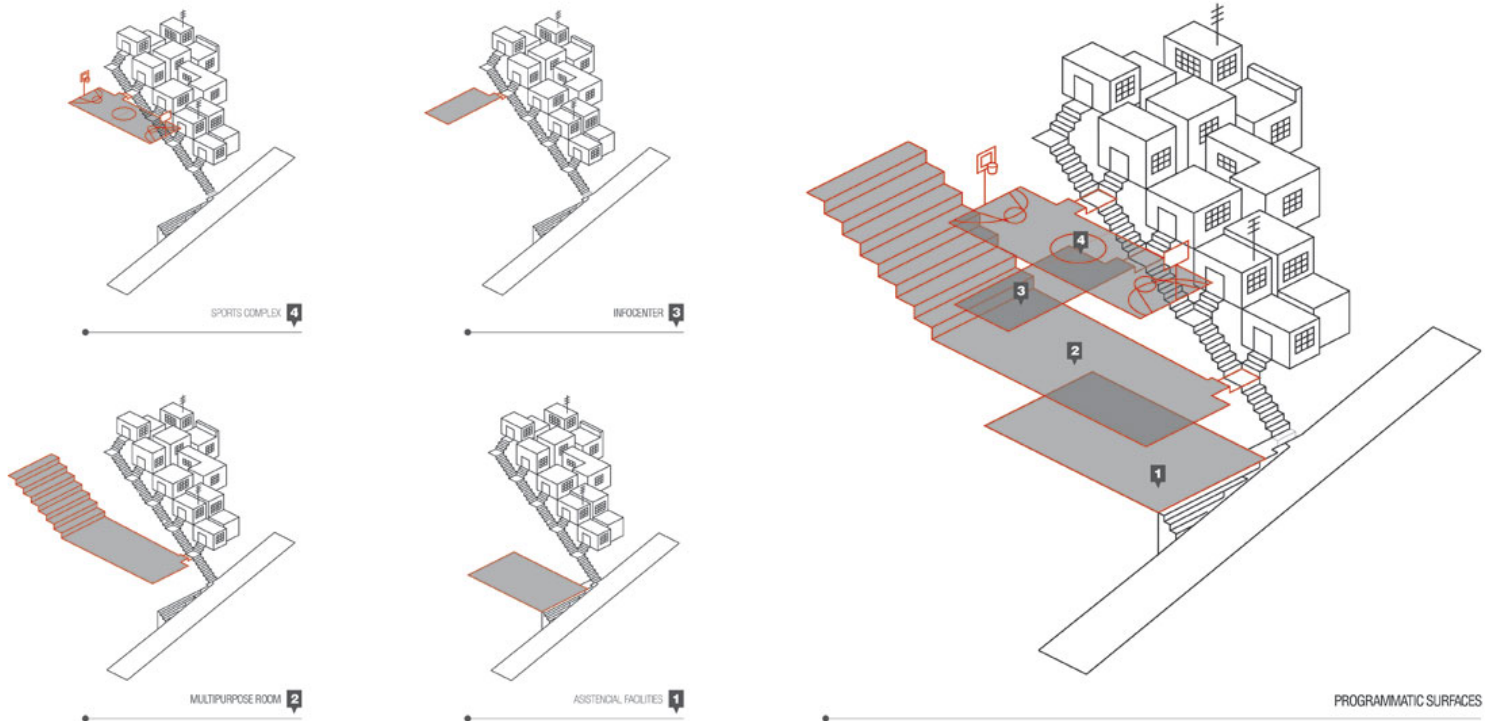

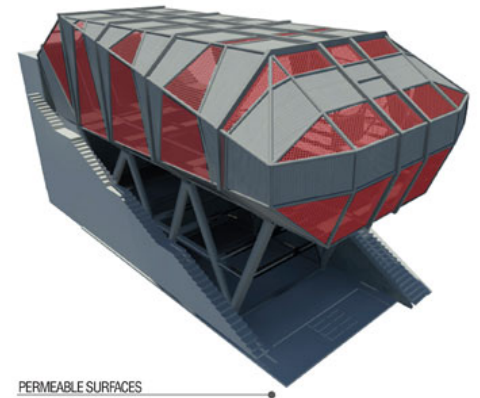

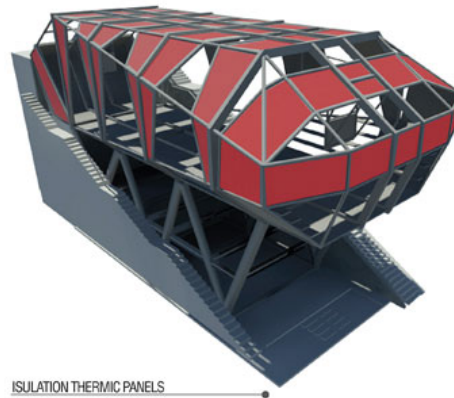

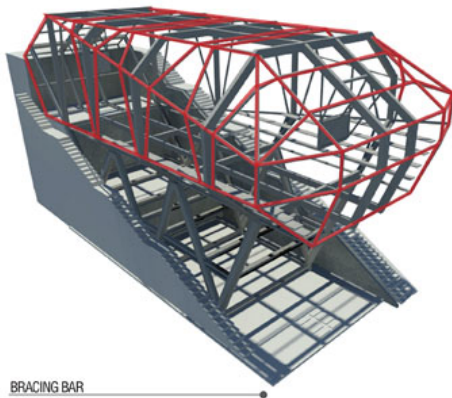

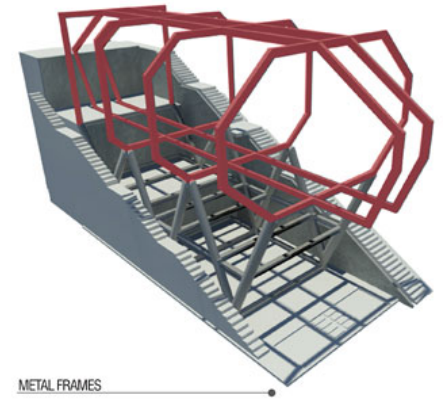

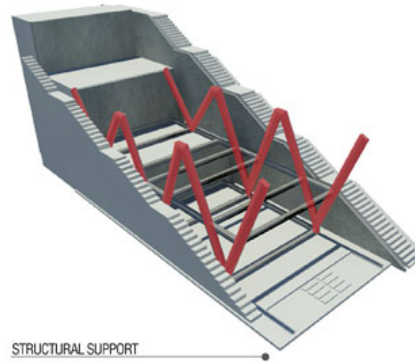

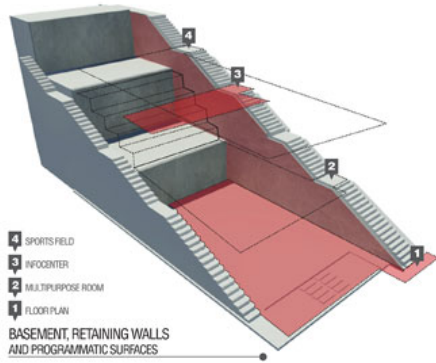

Site Plan Diagram

The Project was led by the communal organization; with cultural and sport associations alongside the local and national governments. The community operates as geopolitical cells called community councils: this structure of territorial power management allows them to map, discuss, evaluate, diagnose and prioritize their problems, needs and demands with a high level of participation, thanks to its flexible and horizontal itinerary. This cells are constitutionally validated, establishing new ways of governability and assemble a legal scaffolding able to canalize the public resources through collective discussion and voting.
